

MACH Controller – Operations and Programming

Target Group

This course is designed for those who will be using MACH controllers.

Prerequisite

To attend this course previous experience with building automation is required.

Description

This course discusses the hardware and setup of the Reliable MACH series of controllers and sensors. These controllers support their own proprietary network or can be configured for BACnet communication.

Representative Topics

- Review of the controller hardware, architecture, and BACnet communications
- Communication setup of the controllers using the Mset software
- Programming of the controllers using RC – Studio
- Graphic production
- Alarm Reporting
- Trending and Logging

Duration of the Course

3 – 4.5 days
